PROFESSIONAL SUMMARY

Full-Stack Software Engineer with **4 years** of experience owning large-scale web systems end to end (React.js, Node.js). Core engineer on a 2-person team that built an internal operations platform from scratch; strong in Kafka event pipelines, polyglot databases (PostgreSQL, MySQL, MongoDB, Redis, ClickHouse), AWS cost optimization, and payment and ad-tech integrations.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL

Frontend: React.js, Next.js (SSR, Edge Runtime), Redux, Vite

Backend: Node.js, Express.js, Microservices, REST APIs, WebSocket (Socket.IO), JWT

Data & Streaming: PostgreSQL, MySQL, MongoDB, Redis, ClickHouse, Apache Kafka, Debezium CDC, AWS S3

Cloud & Integrations: AWS (cost optimization), Docker, Google Ad Manager, Cashfree, Zoho Billing, Razorpay, MSG91, Nginx, LLM APIs

WORK EXPERIENCE

Way2News | Hyderabad, India

Senior Software Engineer

06/2026 - Present

- Fixed a Kafka consumer bottleneck (CPU and bandwidth spikes) as daily impressions grew from **50M to 200M**: replaced **3 MongoDB increments** per event with threshold-based batching and bulk writes, cutting DB writes **~67%** and sustaining **4×** traffic at lower server cost.
- Cut AWS costs **40%** (**$10,000 to $6,000/month**) on a system serving **20M requests/day** by auditing frontend asset delivery: minification, Gzip compression, and bundle restructuring.
- Rebuilt a legacy booking module as a mobile-first SPA (React 18, Vite) on an **~80-endpoint** Node 24/Express 5 API with slot calendar, multi-unit booking, approval routing, and payment collections.
- Led cross-platform push notification integration with Android and iOS developers for real-time booking and approval alerts.
- Replaced a manual monthly CSV invoicing process with Zoho Billing integration: finance teams create and track invoices in-app, with automated reconciliation against delivered spend.

Way2News | Hyderabad, India

Junior Software Engineer

06/2023 - 05/2026

- Launched an LLM-powered BI platform (Looker-style) with NL-to-SQL, a real-time pipeline (Debezium CDC, Kafka, ClickHouse materialized views), multi-tenant RBAC dashboards, and CSV/XLSX export, replacing **5+** per-team reporting tools.
- Architected an internal operations platform from scratch as one of **2 core engineers**: **80+ screens**, **440+ REST APIs**, and RBAC for **8 user roles** (React, Redux, Node.js, PostgreSQL, MySQL, MongoDB, Redis, ClickHouse).
- Shipped a high-QPS content delivery system (Redis-backed API, geo-targeted sorting, pre-materialized payloads, Next.js Edge widgets) sustaining **~150K requests/minute** and contributing to a **10% revenue increase**.
- Built Kafka (KafkaJS) pipelines processing **millions of events daily** into PostgreSQL, MongoDB, Redis, and ClickHouse, with **sub-millisecond** Redis reads.
- Automated nightly Node.js aggregation jobs building pre-computed PostgreSQL tables that power **30+** finance and planning reports, with ClickHouse absorbing analytical load to protect OLTP databases.
- Delivered end-to-end Cashfree payments with live status tracking and HMAC-signed webhook reconciliation, ending manual follow-ups.
- Built a Google Ad Manager and AdMob microservice automating reports, inventory setup, and bulk orders for the operations team.
- Implemented Maker-Checker dual approval for financial and pricing changes, with a timestamped audit trail across all **8 roles**.

Way2News | Hyderabad, India

Trainee Software Engineer

10/2022 - 06/2023

- Founding team member: shipped core React.js and Node.js features and helped set architecture patterns used across the platform.

PROJECTS

Crew Connect (Personal Project) | Node.js, Express, PostgreSQL, React

- Backend developer for a staffing marketplace for event organizers; built REST APIs for two Android apps and a React admin console.
- Implemented JWT auth with refresh-token rotation, MSG91 OTP, and AES-256-GCM encryption of KYC data; integrated Razorpay payments.
- Built the admin web console and deployed on AWS EC2 (free tier) behind an Nginx reverse proxy, with a custom domain pointed to the server.

EDUCATION

B.Tech, Computer Science and Engineering

IIIT Rajiv Gandhi University of Knowledge and Technology (AP-IIIT) | 06/2019 - 05/2023 | GPA: 8.78 / 10.0
