Mopuru Pavanesh

Full-Stack Software Engineer (React.js | Node.js)

Hyderabad, India | pavanesh9652@gmail.com | +91 94410 18339 | linkedin.com/in/mopuru-pavanesh-9b094015a

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with **4 years** of experience owning large-scale web systems end to end (React.js/Next.js, Node.js/Express.js). Core engineer on a 2-person team that built an internal operations platform from scratch. Strong in event-driven systems (Kafka), polyglot data layers (PostgreSQL, MongoDB, Redis, ClickHouse), AWS cost optimization, and payment and ad-tech integrations.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL

Frontend: React.js, Next.js (SSR, Edge Runtime), Redux, Vite

Backend: Node.js, Express.js, Microservices, REST APIs, WebSocket (Socket.IO), JWT

Data & Streaming: PostgreSQL, MySQL, MongoDB, Redis, ClickHouse, Apache Kafka, Debezium CDC, AWS S3

Cloud & Integrations: AWS (cost optimization), Docker, Google Ad Manager, Cashfree, Zoho Billing, LLM APIs

WORK EXPERIENCE

Way2News | Hyderabad, India

Senior Software Engineer

06/2026 - Present

- Fixed a Kafka consumer bottleneck (CPU and bandwidth spikes) as daily impressions grew from **50M to 200M**: replaced **3 MongoDB increments** per event with threshold-based batching and bulk writes, cutting DB writes **~67%** and sustaining **4×** traffic at lower server cost.
- Cut AWS costs **40%** (**$10,000 to $6,000/month**) on a system serving **20M requests/day** by auditing frontend asset delivery: minification, Gzip compression, and bundle restructuring.
- Rebuilt a legacy booking module as a mobile-first SPA (React 18, Vite) on an **~80-endpoint** Node 24/Express 5 API (PostgreSQL, MySQL, MongoDB, Socket.IO): slot calendar, multi-unit booking, approval routing, and payment collections.
- Led cross-platform push notification integration with Android and iOS developers, delivering real-time booking and approval alerts across web and native apps.
- Replaced a manual monthly CSV invoicing process with Zoho Billing integration: finance teams create and track invoices in-app, with automated reconciliation against delivered spend.

Way2News | Hyderabad, India

Junior Software Engineer

06/2023 - 05/2026

- Launched an LLM-powered BI platform (Looker-style) with NL-to-SQL, a real-time pipeline (Debezium CDC, Kafka, ClickHouse materialized views), multi-tenant RBAC dashboards, and CSV/XLSX export, replacing **5+** per-team reporting tools.
- Architected an internal operations platform from scratch as one of **2 core engineers**: **80+ screens**, **440+ REST APIs**, and RBAC for **8 user roles** (React, Redux, Node.js, PostgreSQL, MySQL, MongoDB, Redis, ClickHouse).
- Shipped a high-QPS content delivery system (Redis-backed API, geo-targeted sorting, pre-materialized payloads, Next.js Edge widgets) sustaining **~150K requests/minute** and contributing to a **10% revenue increase**.
- Built Kafka (KafkaJS) pipelines processing **millions of events daily** into PostgreSQL, MongoDB, Redis, and ClickHouse; Redis caching delivered **sub-millisecond** reads.
- Automated nightly Node.js aggregation over **1,500+** entities into pre-computed PostgreSQL tables powering **30+** finance and planning reports, with ClickHouse absorbing analytical load to protect OLTP databases.
- Delivered end-to-end Cashfree payments: in-app orders, live status tracking, and automated reconciliation via HMAC-signed webhooks and settlement callbacks, ending manual payment follow-ups.
- Built a Google Ad Manager and AdMob microservice for automated reports, inventory setup, and bulk order management, removing the operations team's dependence on the GAM UI.
- Implemented Maker-Checker dual approval for financial configuration and pricing changes, with a timestamped audit trail on every state transition across all **8 roles**.

Way2News | Hyderabad, India

Trainee Software Engineer

10/2022 - 06/2023

- Founding team member during the platform's early build: shipped core React.js and Node.js features, contributed to system design discussions, and helped set architecture patterns used across the platform.

EDUCATION

B.Tech, Computer Science and Engineering

IIIT Rajiv Gandhi University of Knowledge and Technology (AP-IIIT)

06/2019 - 05/2023 | GPA: 8.78 / 10.0
